

WHITNEY CURETTES

WHITNEY
Has 4 Great Tips For You!

The best way to safely remove bone cement.

During Hip or Knee Replacement Use Whitney Currettes

Safer Than Steel

- Made of plastic—softer than surgical steel.
- Reduces the risk of marring the prosthesis.
- Helps eliminate micro-scratches.

Handier

- Molded-in thumb indentation instantly orients tip of tool.
- Easy to maneuver when collecting and scraping away excess cement.
- Color-coded for easy identification.

Faster

- Individually packaged, sterile and ready to go.
- Quickly removes excess bone cement with fingertip precision.

Costs Less

- Saves time and money.
- Less expensive to buy and inventory—order only the tool you use.
- Disposable—no need to waste time removing hardened cement and resterilizing.

AVAILABLE IN FOUR STYLES

Sterile tools individually packaged in cartons of 25.

Carton dispenses tools individually.

Volume discounts available.
